

MC-25A

SPECIALTY INSTALLATIONS—PRE ENGINEERED ROOF

Installation on Metal Deck—Considerations
 Ribs Running Perpendicular To Roof Slope With Rigid Sheathing

FOR INFORMATIONAL PURPOSES ONLY—THESE HAVE NOT BEEN EVALUATED BY UNIFORM ES.

The pre-engineered roof systems are included for informational purposes only and are not recognized under evaluation reports for roof tiles

**NOTES:**

1. Vertical battens to be metal or as approved or designed as per metal deck manufacturer
2. For recommended underlayment and fastening, see Page 13, Table 1A, 1B & 1C
3. An eave drip flashing is required with stucco fascia, EIFS (Exterior Insulated Finish System) and flush fascia perimeter edges.
4. The fasteners shall penetrate a minimum of 3/4" into dimensional wood decking or pass through wood panel sheathing which ever is less.
5. Eave closures should be the height equal to combined thickness of batten system and thickness of one course of tile.
6. On Type I (Non-Combustible) building, all components must be fire-resistant as approved by local building official.
7. Dimensions shown are minimums and are intended to be approximate to all for reasonable tolerances due to field conditions.

Drawing shown depicts the application of all tile profiles. Unless otherwise noted, it would apply to either concrete or clay tiles.
