

SECURE ROLL™

FLEXIBLE FLASHING

SECURE TILE ROOF™
COMPONENTS
by Eagle Roofing Products

High Quality, Superior Strength Protection you can count on.

Eagle Roofing Products has partnered with our friends at Plioseal™ to provide you with the highest quality flexible flashing in the market. Secure Roll is made with a tough two layer EPDM surface that is non-toxic and lead-free, and cleverly created to withstand rain, wind, sun and snow.

#1 Distinguishing Characteristic: A FULLY-ADHERED BACK

Secure Roll has a double release, fully-adhered back that is extremely moldable and flexible, enabling you to flash all the significant areas of a roof prior to, during and after tile installation. Other flashings have narrow strips of adhesive on the back. Not ours. With Secure Roll you get:

- A fully adhesive back that adds strength and superior wind resistance
- A hydrophobic adhesive surface that allows installation in wet conditions
- Greater moldability
- Easy installation - sticks to itself without tools or heat
- Ability to apply directly to most construction materials without the need of additional fastening

Additional features and benefits

- Made in the USA
- No long waits - In stock and readily available
- Non-toxic lead alternative
- Thickest flexible flashing in the industry
- Paintable EPDM surface
- Ability to cut and shape it to any size you need
- UV resistant

Apply Secure Roll to:

- Head wall detail on all profiles
- Topical side wall flashing on all profiles
- Side wall step flashing detail on all profiles
- Valley soaker & juncture
- Chimneys & skylights
- Pitch transitions
- Penetration flashing detail
